01 / MAIN JOURNEY

From customer complaint to approved service closure

Who does what, what happens next, and how each stage stays linked to the service case.

1 Complaint received
PUBLIC CUSTOMER
- Public web link, no account
- Customer, site, issue, files

→

2 Case triage
DISPATCHER
- Check duplicate / classify fault
- Identify site and equipment

→

3 Create work order
DISPATCHER
- Priority, due date, engineer
- Planned visit and supervisor

→

4 Engineer receives job
ENGINEER
- View assignment and panel
- Accept or decline the job

↓

5 Travel to site
ENGINEER
- Start/end outbound journey
- Save time against this job

←

6 On-site inspection
ENGINEER
- Start/end site work
- Check each panel separately

←

7 Record service findings
ENGINEER
- Energy state, faults, tests
- Photos, GPS, actions, parts

←

8 Return to base
ENGINEER
- Start/end return journey
- Three-stage time log complete

↓

9 Quality / material action
QCA / STORES
- If defects: NCR and QCA
- Track parts independently

→

10 Supervisor review
SUPERVISOR
- Approve or return with reasons
- Keep correction history

→

11 Customer closure
AUTHORIZED STAFF
- Confirm outcome and open items
- Close only when authorized

→

12 Management reporting
MANAGER
- Dashboard, maps, audit
- PDF and Excel exports

KEY RULE One attendance can contain multiple panels. Each new site/job gets its own three-segment time log.

Only authorized users see private records. Public submitters receive a reference, not access to existing cases.

02 / ENGINEER JOURNEY

The engineer's exact three-stage job timer

Mandatory v4 rule: three segments only. Each segment has a Start and End action.

STAGE 1

Room/base to site

Start Travel to Site
Engineer taps button

↓

End Travel at Site
System saves end timestamp

→

STAGE 2

Work at site

Start Work
Engineer taps button

↓

End Work
System saves end timestamp

→

STAGE 3

Site back to base

Start Return Travel
Engineer taps button

↓

End Travel at Room/base
System saves end timestamp

EVERY EVENT SAVES

User identity | Linked case and work order | Site | Server timestamp | Duration | Audit history

AT THE SITE, THE ENGINEER ALSO RECORDS

- Panel serial, equipment type and voltage
- Energized / De-energized (or reviewed exception)
- Inspection answers, measurements and cause
- Photos, GPS on tap, materials and next action

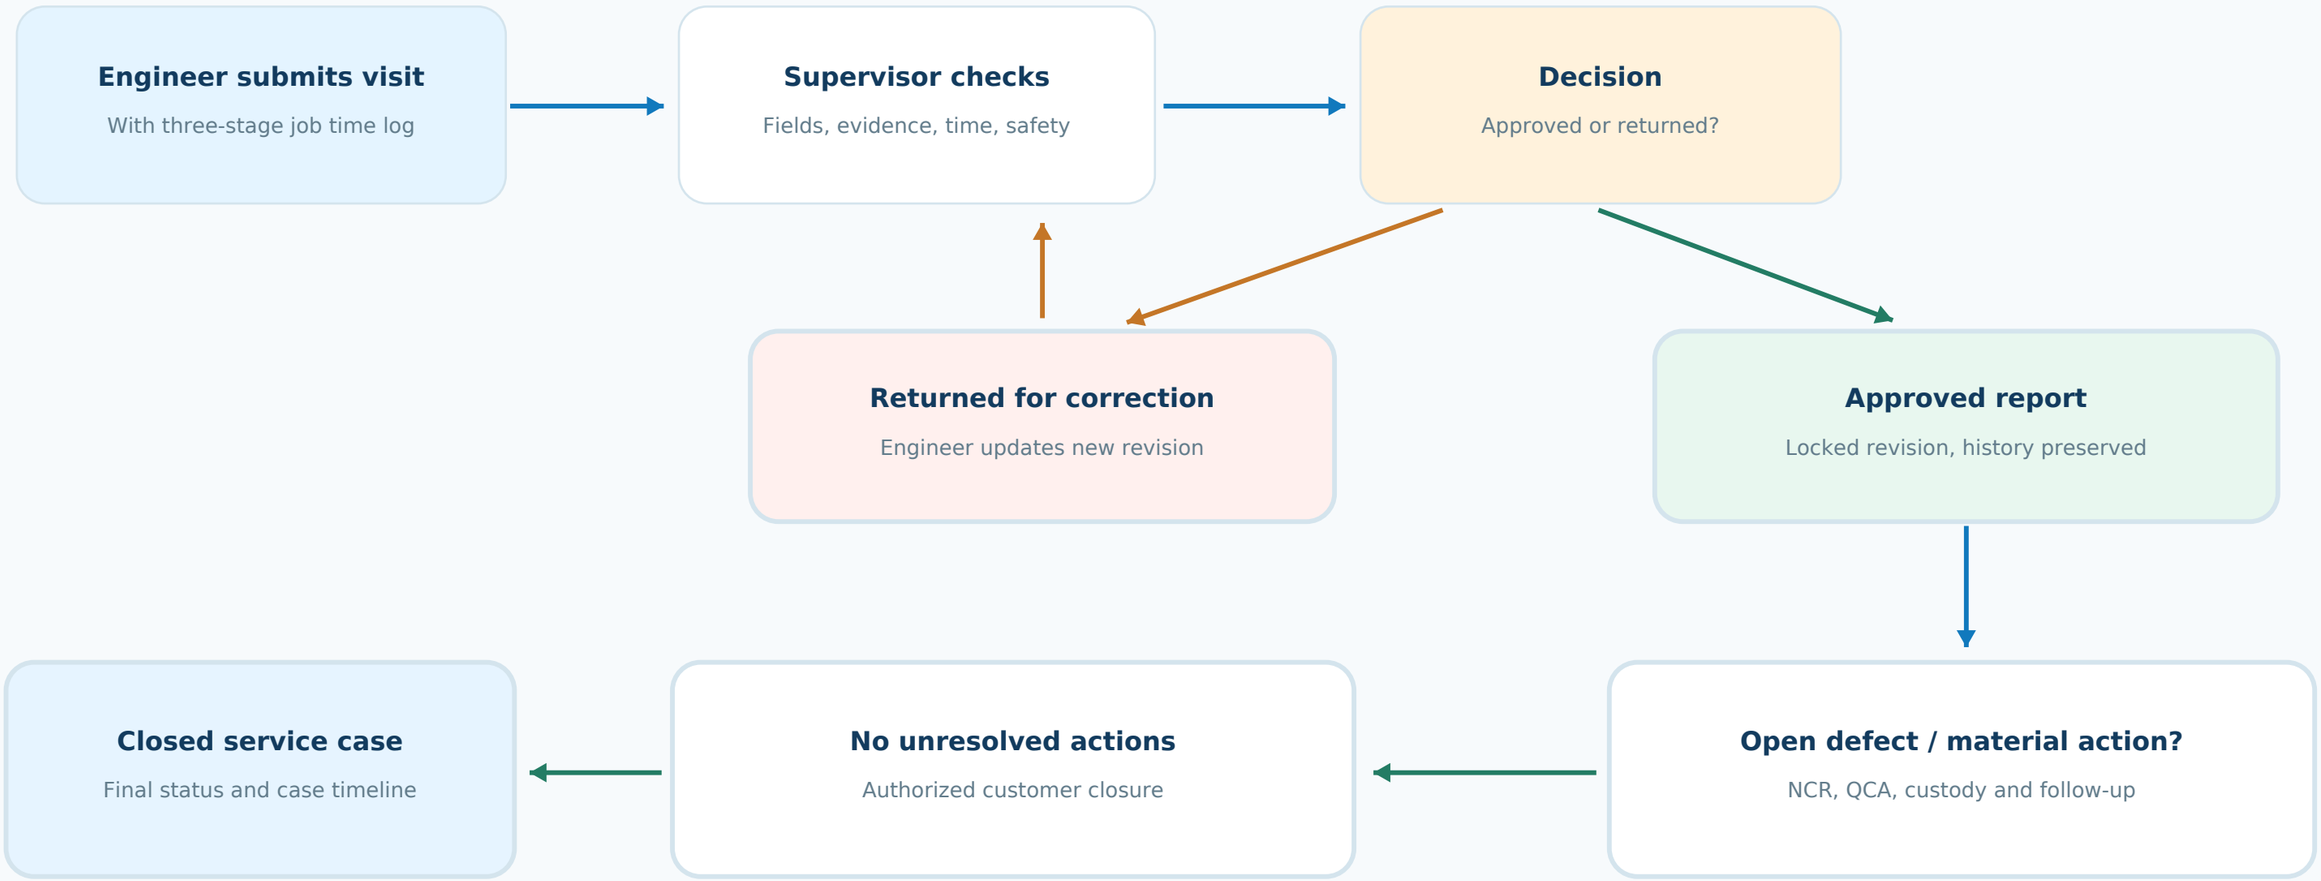

SYSTEM ENFORCES

- No extra break / waiting / miscellaneous segment
- No skipped, duplicated or overlapping time events
- Supervisor reviews; corrections require a reason
- No continuous GPS tracking of staff

03 / DECISIONS AND CONTROLS

Approval, exceptions and management visibility

This diagram shows the key branches after an engineer submits the service report.

MANAGEMENT HAS CONTROLLED VISIBILITY ACROSS THE ENTIRE PROCESS

Dashboard • open and overdue cases • work orders • equipment history • NCR/material queues • maps • audit trail • PDF/Excel reports
